TC Hub
Thermocouples multiplier

With TC Hub four additional thermocouples can be connected via CAN to EVO4 and MXL Pista/Pro05 logger. Using more TC Hub you can easily keep under control all your temperature sensors data, monitoring each single cylinder exhaust gas temperature, together with water, oil and head temperatures.

Keep all temperatures of your engine under control

Waterproof and robust thanks to its aluminum structure, TC Hub provides reliable data as its sampling frequency is configurable up to 50Hz per channel. Finally, with TC Hub wiring overall is reduced to the minimum.
